

MyBiotics Pharma is an exciting microbiome company developing live bacteria-based products.

We are expanding and looking for experienced microbiologists to join our innovative team.

### **Microbiology Research Scientist**

- BSc or MSc with hands-on experience in microbiology research
- Highly familiar with laboratory equipment and procedures
- Experienced in preparation of experimental protocols, documentation, analysis and interpretation of data
- Experience working with anaerobic bacteria and strict anaerobic bacteria sp.- an advantage
- Experience working in cGMP environment – an advantage
- Highly motivated team player

### **Microbiology Specialist**

- MSc or PhD with at least 3 years hands-on experience in a microbiology laboratory including culturing, isolating, identifying, and testing bacteria
- Proven experience working with anaerobic and strict anaerobic bacteria, with preference to the human microbiome
- Experience in growing complex bacterial communities (co-culture) and difficult to grow bacteria - An advantage
- Experience in molecular biology techniques (e.g. sequencing, NGS, qPCR, gene expression), flow cytometry - An advantage
- Experience working in a cGMP environment - An advantage
- Highly motivated team player
